

SPEEDGATE XENTRY ON STREET

A professional vehicle entrance for locations where flexibility is essential, without compromising on security, appearance or functionality. No permanent foundation required. With all the quality of a permanent Speedgate.

Xentry on Street

Temporarily installed. Professionally secured.

Some locations require flexibility rather than an immediate permanent Speedgate installation.

During renovations, construction work or temporary security projects, a secure vehicle entrance may be required where extensive groundwork is neither possible nor desirable.

The Xentry on Street was developed specifically for this purpose. Based on proven Xentry STS Speedgate technology, the Xentry on Street offers the quality, appearance and capabilities of a permanent Speedgate, combined with the flexibility of a temporary or semi-permanent installation.

This enables you to create a secure and professional entrance in a short space of time.

No foundation

Ideally suited to existing locations where excavation is neither possible nor desirable.

No traditional foundation

Minimise groundwork and modifications to existing infrastructure.

Everything above ground

Cabling and services are integrated into the solution.

No additional space required

Thanks to its compact design, the installation remains within the existing footprint.

Quick to install

The fully assembled installation can be positioned on site using a forklift.

Easy to relocate

If the situation changes, the installation can be redeployed.

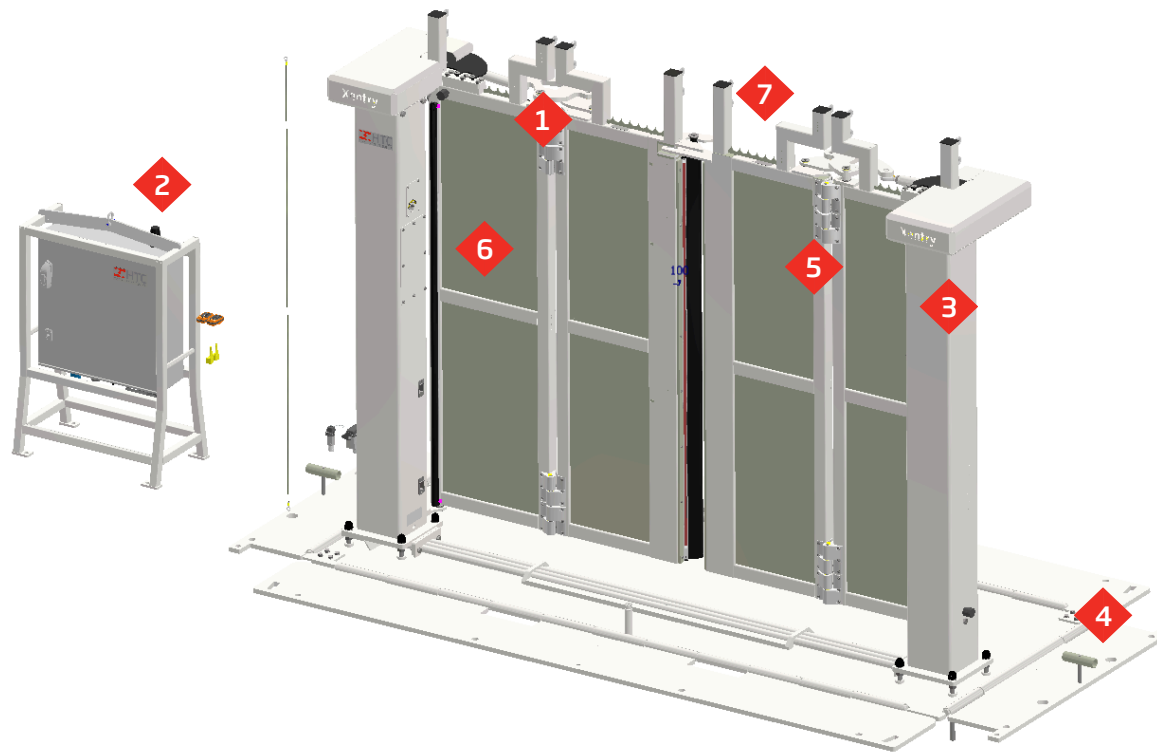

Advanced options

- Anti-climb protection
- Safety features
- Access control
- Integration with existing security systems
- Various infill options
- High-security RC3-designed wing locking with integrated locking pin

Xentry on Street specifications

A Speedgate installation may be temporary. The requirements for quality and security are not.

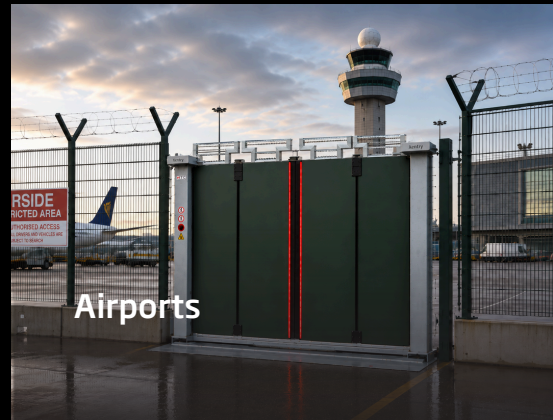

- 1 **Security**
Designed according to RC3 principles. Integrated locking pin provides secure wing locking by mechanically connecting both gate wings.
- 2 **Control system**
TÜV-certified control system.
- 3 **Columns**
Heavy-duty steel sections.
- 4 **Steel substructure**
No traditional foundation required.
- 5 **Hinges**
Integrated into the folding structure of the Speedgate.
- 6 **Infill**
Various infill options available.
- 7 **Anti-climb protection**
Can be equipped with anti-climb protection for an increased level of security.

Security tailored to the situation

Every location requires a different approach.

A courthouse has different access requirements from an airport or defence facility. That is why we always consider the complete situation: the location, traffic flows, existing infrastructure and required security level.

Xense service

Designed for sustainability. Smartly supported.

With Xense Service and preventive maintenance, your Speedgate continues to perform optimally while unplanned downtime is minimised.

- ✦ **Real-time monitoring**
- ✦ **Installation status**
- ✦ **Predictive maintenance**
- ✦ **Reduced downtime**
- ✦ **Longer service life**
- ✦ **EPD & MKI available**

Lasting value

Temporary today. Permanent tomorrow.

A temporary location does not have to mean a temporary investment. When a project ends, the Xentry on Street can be relocated and redeployed.

Install

Quickly create a professional vehicle entrance without a traditional foundation.

Relocate

Does the location change or the project come to an end? The Speedgate can be relocated using a forklift and transported by truck.

Reuse

Redeploy the Xentry On Street at the same or another location and maximise the value of your investment.

Permanent installation

When temporary security is no longer required, the Speedgate can be converted into a permanent installation.

Speedgate Xentry on Street

A faster and more secure entrance?

Optimise your vehicle entrance with the proven expertise and security of HTC's Speedgate Xentry on Street.

- In-house production & engineering
- One partner for installation, service and maintenance
